## How Kordon Works

Kordon's design is unique. It comprises a special layer of webbing to which a precise treatment of synthetic pyrethroid is applied with 100% consistency. This is then sealed between two robust sheets of quality UV stable plastic to deliver environmentally safe termite protection that is not only guaranteed to last, but fully conforms with the **Australian Building code AS3660** and **ABCB certification No. 2003/001**.
